GEOCHIMICA ET COSMOCHIMICA ACTA

EXECUTIVE EDITORS

PROF. C. W. CORRENS *Sedimentpetrographisches Institut der Universität, Lotzestr.* 13, *Göttingen, Germany*
PROF. E. INGERSON *Department of Geology, University of Texas, Austin* 12, *Texas, U.S.A.*
PROF. L. R. WAGER, F.R.S. *Department of Geology and Mineralogy, The University Museum, Oxford, England*

EDITORS

PROF. L. H. AHRENS *Department of Chemistry, University of Capetown, Rondebosch, Cape Province, South Africa*
DR. S. R. NOCKOLDS *Department of Mineralogy and Petrology, The University, Cambridge, England*
PROF. H. C. UREY, For. Mem. R. S. *University of California, La Jolla, California, U.S.A.*
DR. JOHN VERHOOGEN *Department of Geology, University of California, Berkeley, California, U.S.A.*
PROF. A. P. VINOGRADOV *Vernadsky Institute, Moscow, U.S.S.R.*
PROF. W. A. WAHL, *Observatoriegaten* 8, *Helsingfors, Finland*

INFORMATION FOR CONTRIBUTORS

I. GENERAL

1. Papers should be submitted to the appropriate Executive Editor—Prof. L. R. WAGER for papers from the United Kingdom and British Commonwealth, and for papers in English from Europe; Prof. C. W. CORRENS for papers in German or French; Prof. E. INGERSON for papers from the American continents. Papers submitted for publication will naturally be judged from the standpoint of scientific originality and novelty. Technical details of apparatus used in scientific investigation can, however, be presented in brief notes. Critical comments or preliminary results requiring early publication should be submitted as letters to the editors. Where possible, letters should be confined to 500 words. The preparation of progress reports and review articles will be invited by the editors from time to time. The journal appears as independent and complete numbers, which are combined into volumes of about 300 pages.

2. Only papers which have not been previously published can be accepted. Authors must agree not to publish elsewhere a paper submitted to and accepted by *Geochimica et Cosmochimica Acta*.

3. Fifty reprints of each paper are provided free. Additional copies can be purchased if ordered at the time the first proofs are returned. A reprint order form will accompany first proofs.

II. SCRIPT REQUIREMENTS

1. Scripts must be written in one of the three official languages—English, French or German.

2. The script should be typed (not a carbon copy). The text must be ready for printing and should be carefully checked for errors. Authors will receive proofs for correction.

3. Illustrations should accompany the script, mounted on separate sheets. Line diagrams that require to be redrawn should include all relevant details. Half-tone illustrations should be restricted to the minimum necessary. Photographs should be enlarged sufficiently to permit their clear reproduction, and if words or numbers appear on them, two copies should be sent, one clearly printed and the other without inscription. All illustrations should be provided with descriptive legends, which should be given on a separate sheet. Any lettering on diagrams—other than Greek letters, symbols, etc.—should be stencilled and should be sufficiently large and bold to permit reproduction when the diagram has been reduced to a size suitable for inclusion in the journal.

4. References in the text should be given by quoting the author's name and year of publication, i.e. AHRENS (1952). **Full references should be listed at the end of each paper, in alphabetical order, in the following manner:**

AHRENS, L. H. (1952) The use of ionization potentials—I. Ionic radii of the elements. *Geochim. et Cosmochim. Acta* **2**, 155–169.

and should include the full title of the article, standard abbreviated title of the journal, year, volume number and inclusive page numbers.

5. The text of articles submitted should be concise and in a readily understandable style. The technical description of the methods used should only be given in detail when such methods are new. The essential contents of each paper should be briefly recapitulated in an abstract in English. Such an abstract may, however, be submitted by the author in the language of the original typescript for translation into English by the editorial staff.

6. To conserve space, authors are requested to mark less important portions of the paper (such as description of methods, record of experimental results, etc.) for printing in smaller type.

7. Indices of refraction should be denoted by the symbols α, β, γ, ω, ε, n and vibration directions by X, Y, Z, O and E.

CONTENTS

NUMBER 1

A. E. Ringwood: The Novo Urei meteorite 1

D. E. Fisher and O. A. Schaeffer: Cosmogenic nuclear reactions in iron meteorites . 5

R. W. Hoffman and G. W. Brindley: Adsorption of non-ionic aliphatic molecules from aqueous solutions on montmorillonite. Clay-organic studies—II. 15

A. M. Pommer and I. A. Breger: Potentiometric titration and equivalent weight of humic acid 30

A. M. Pommer and I. A. Breger: Equivalent weight of humic acid from peat . . 45

G. Jurain: Moyens et résultats d'étude de la radioactivitié due au radon dans les eaux naturelles 51

Papers to be published in future issues 83

NUMBER 2

S. R. Taylor: Abundance and distribution of alkali elements in australites . . 85

J. H. Reynolds: Rare gases in tektites 101

M. A. van Dilla, J. R. Arnold and E. C. Anderson: Spectrometric measurement of natural and cosmic ray-induced radioactivity in meteorites 115

G. W. Reed, K. Kigoshi and A. Turkevich: Determination of concentrations of heavy elements in meteorites by activation analysis 122

Ann DuFresne: Selenium and tellurium in meteorites 141

Mary Vogt Woodland: Data of rock analyses—VII. Bibliography and index of rock analyses in the periodical and serial literature of the Republic of Ireland and of Northern Ireland 149

Geochemical Notes:

B. J. Rushton: Beryllium in Tanganyika granitic rocks 154

A. E. Ringwood: Cohenite as a pressure indicator in iron meteorites . . . 155

L. R. Wager: The relationship between the fractionation stage of basalt magma and the temperature of the beginning of its crystallization 158

NUMBERS 3 and 4

R. Kretz: The distribution of certain elements among coexisting calcic pyroxenes, calcic amphiboles and biotites in skarns 161

Tsaihwa J. Chow and E. D. Goldberg: On the marine geochemistry of barium . . 192

F. A. Brooks: Trace and minor elements in Woodbine sub-surface waters of the East Texas basin 199

F. Frölich: Beitrag zur Geochemie des Chroms 215

A. E. Ringwood: Some aspects of the thermal evolution of the earth 241

L. H. Ahrens, R. A. Edge and S. R. Taylor: The uniformity of concentration of lithophile elements in chondrites—with particular reference to Cs 260

Yoshio Horibe and Mituko Kobayakama: Deuterium abundance of natural waters . 273

D. C. Hess and R. R. Marshall: The isotopic compositions and concentrations of lead in some chondritic stone meteorites 284

G. D. Flesch, H. J. Svec and H. G. Staley: The absolute abundance of the chromium isotopes in chromite 300

Papers to be published in future issues 310
